Put web page info into spreadsheet tables

Tablarize gets information on web pages and puts it into tables in your favorite spreadsheet.

Teach Tablarize the data that you want by giving it a screenshot of one sample item from the list on your active browser tab. Tablarize collects data that looks like your sample. You can then paste the collected data into your favorite spreadsheet.

Collect and collate data about **products, events, jobs, airfare, vacation homes, apartments** - whatever. Merge data from multiple websites for easy comparison.

Get data incognito or as a logged in user

As a Chrome Browser Plug-in, Tablarize collects data via your browser. You can get data anonymously as an incognito user or as a logged in user on a website.

Teach Tablarize the data that you want to collect with a screenshot of sample item

Give Tablarize a screenshot of a sample item from the list in your active browser tab to teach it the data you want to collect into a table.

Get data across multiple pages and from infinite lists with a screenshot

Give Tablarize a screenshot of the numbered page links at the bottom of page or the "Load More" button at the end of an infinite list. Tablarize will go page to page or progress through an extending list.

Give Tablarize a list of URLs to get data from

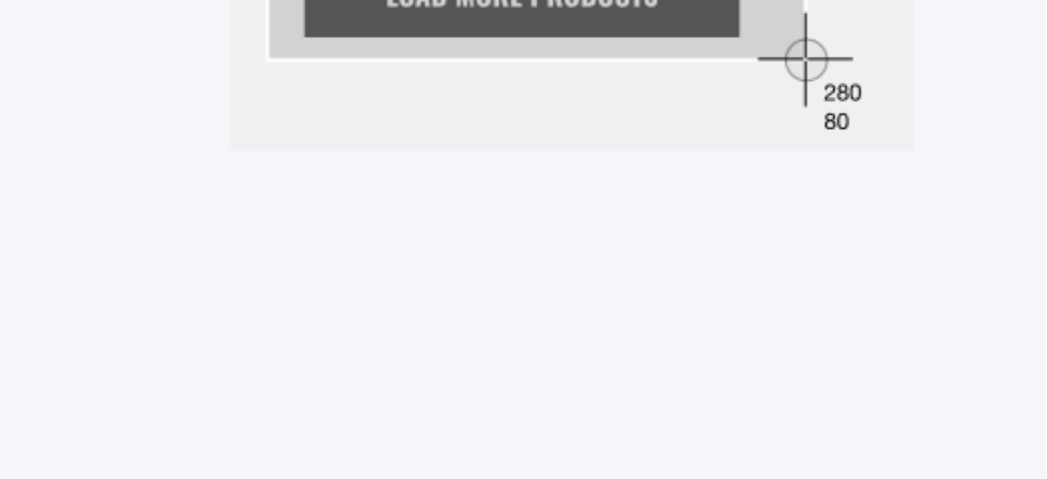

Give Tablarize a list of URLs from a website and it will get data that looks like the sample screenshot item from each URL.

https://	/	/	/	
https://	/	/	/	
https://	/	/	/	

Get detailed data of items by digging deeper into each item's detailed info page

Give Tablarize a screenshot of the detailed data that you want on the sample item's detailed info page to teach Tablarize the additional data that you want to collect for each item. Tablarize will collect the new fields and add columns to your table.

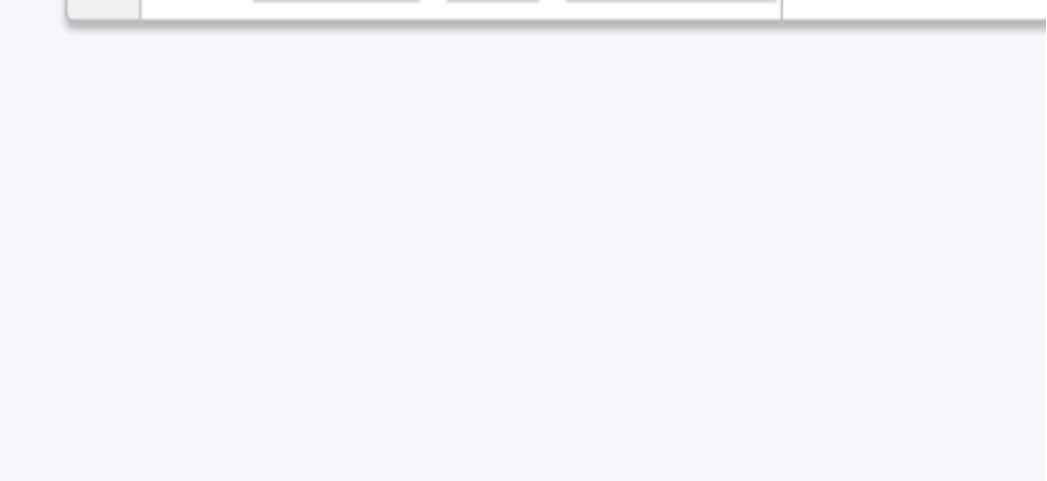

Does your airfare include check-in baggage or meals? What is the shipping cost and speed for the new shoes? Are returns free?

Teach Tablarize to search target terms and get search results periodically over time

Do you want to see what search ads and search results appear over time?

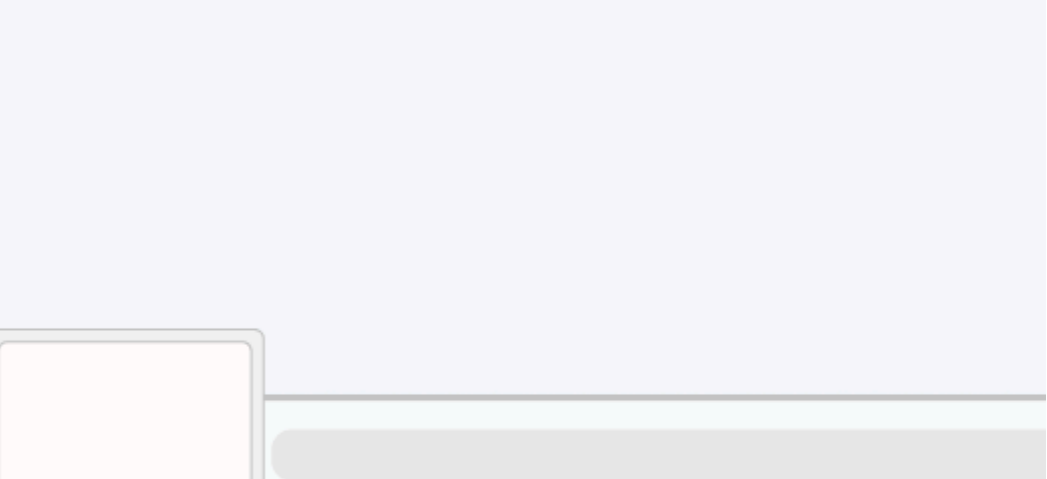

Teach Tablarize to search by giving it a screenshot of the search bar on homepage and giving it a list of search terms. Tablarize can collect snapshots of data at your desired frequency.

Teach Tablarize to navigate to target pages and get data overtime

Do you want to data about what's on "Today's Deals" page daily?

Teach Tablarize to navigate to target pages by giving it screenshots of the links it should follow. Tablarize can collect snapshots of data over time.

Day 1 Snapshot				
Day 2 Snapshot				
Day 3 Snapshot				

See how snapshots change over time

See highlights of data that's changed from snapshot to snapshot without having to look at entire data sets. See data tables of what's new, what's stayed the same, what's changed, and what's no longer there.

Difference between Day 1 and Day 2

New Rows				
Existing Rows				
Dropped Rows				

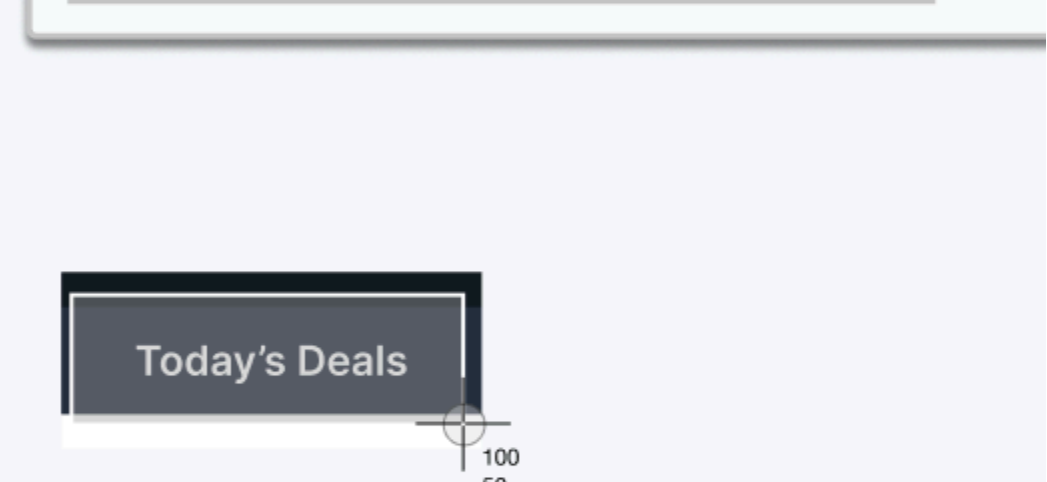

Merge results from multiple websites into a single unified table

Tablarize merges results from different websites so that you can compare your options in a single unified table.

a.com				
b.com				
c.com				

Get an email when something you're tracking changes

Configure Tablarize to send an email notification when a field value such as price changes on the detailed item info page between data snapshots.

See the original screenshots of webpages that hold the data that Tablarize got for you

Tablarize can display the original screenshots of webpages that have the data interests you so that you can see what that an ad or the item actually looked like.
